L3 ANSWER 1 OF 8 CA COPYRIGHT 1999 ACS
AB The **thermochromic** imaging material comprises a transparent, heat-resistant plastic substrate, a thermal recording layer capable of transforming between a transparent state and an opaque state upon heat application, an optical reflection layer, and a **protective layer** facing a thermal head.

L3 ANSWER 2 OF 8 CA COPYRIGHT 1999 ACS
AB A display medium is disclosed, comprising at least the following layers, in this order: a heating resistive layer, a conductive layer, a background layer and an erasable **thermochromic** layer, and comprising a heating resistive layer which may comprise at least two layers. The display medium may also comprise a contact resistance reducing layer on the heating resistive layer and a **protective layer** on the erasable **thermochromic** layer.

L3 ANSWER 3 OF 8 CA COPYRIGHT 1999 ACS
AB The title recording sheets comprise a metal reflective layer, a releasing adhesive layer, a transparent support layer, a **thermochromic** recording layer which reversibly changing between transparent state and opaque state according to the temp., and a **protective layer**.

L3 ANSWER 4 OF 8 CA COPYRIGHT 1999 ACS

AB The title materials such as drapery have a **thermochromic** layer, a coating layer contg. metallic pigments, TiO₂, iron oxide, cesium oxide or/and Zn oxide, and optionally a **protective layer** contg. light stabilizers where the **thermochromic** layer is derived from electron-donating type org. color-developing compds. and electron-accepting compds. Thus, rotary-screen printing a white polyester

fabric with a compn. contg. com. **thermochromic** substances (no data) 30, acrylate ester resin emulsion 70, and crosslinker 1 part, and covering on top with a compn. contg. Iriodin 225 10, acrylic ester resin 40, silicone defoaming agent 0.5, Bu acetate 20 and arom. medium-boiling-point solvent 15 parts gave a decorative fabric useful as curtain with good lightfastness.

L3 ANSWER 5 OF 8 CA COPYRIGHT 1999 ACS

AB In the title medium comprising an electron-donor chromogenic compd. and an

electron-acceptor compd. on a support as recording layer which renders color on heating and melting and changes its color from colored to colorless upon heating and melting at a temp. lower than the coloring temp., an interlayer 1-5.μm is interposed between the recording layer and a **protective layer**, the interlayer being based on a water-base resin and the **protective layer** being based on an oil-base resin. The medium showed improved heat resistance, durability, and extended service life.

L3 ANSWER 6 OF 8 CA COPYRIGHT 1999 ACS

AB The tester for indicating the emf. of a dry-cell battery comprises a film substrate, an elec. conductive layer on 1 side of the substrate, a **protective layer** on the conductive layer, and a **thermochromic** layer on the other side of the substrate. Preferably, the cond. of the conductive layer varies from its center portion to its terminal portions, and the **thermochromic** layer consists of segments which change color at different temps. To test the emf. of a dry-cell battery, the conductive layer is made to contact both electrodes of the battery, and the emf. is indicated by the color change of the **thermochromic** layer.

L3 ANSWER 7 OF 8 CA COPYRIGHT 1999 ACS

AB The claimed thermal recording materials, based on a **thermochromic** compn., contain a dye or pigment in the recording layer or in a top (**protective**) **layer** so that the reflection characteristics of the image area and nonimage area (after recording) are the same or similar to each other. Although the recorded images are visible, further photocopying is prevented.

L3 ANSWER 8 OF 8 CA COPYRIGHT 1999 ACS

AB A heat-sensitive film contg. microencapsulated liq. crystals is described.

The film undergoes color change upon temp. variation or heating caused by absorption of radiation and is suitable for use as temp. sensors, decoration cards, advertisement boards, and detectors of microwave, IR, and laser radiations. Thus, a soln. of a mixt. of cholesteryl nonanoate, cholesteryl benzoate, and alkenyl cholesteryl carbonate was microencapsulated using gelatin and gum arabic, coated on a heat-absorbing

black film support, and overcoated with a nitrocellulose **protective layer** to give a **thermochromic** film.

58. 4,916,043, Apr. 10, 1990, Image-forming method employing light-sensitive material comprising the removal of water from the base paper support; Akihiko Nagumo, et al., 430/203, 253, 254, 349, 350, 538 [IMAGE AVAILABLE]

59. 4,913,999, Apr. 3, 1990, Light-sensitive material comprising light-sensitive layer provided on support where layer has specified ph; Shigehisa Tamagawa, et al., 430/138, 203, 270.1, 281.1, 538, 939; 503/200 [IMAGE AVAILABLE]

60. 4,912,011, Mar. 27, 1990, Image-recording method comprising heating a light-sensitive material containing microcapsule; Soichiro Yamamoto, et al., 430/138, 203, 253, 254, 281.1, 292, 617; D8/1 [IMAGE AVAILABLE]

=> d 14 61-94

61. 4,904,563, Feb. 27, 1990, Microcapsules and light-sensitive recording material using the same; Toshiaki Aoai, et al., 430/138; 428/402.2, 402.21, 402.22, 402.24; 430/270.1 [IMAGE AVAILABLE]

62. 4,904,561, Feb. 27, 1990, Light-sensitive material containing silver halide, reducing agent and polymerizable compound wherein the material is sensitive from only 600 nm to 950 nm; Soichiro Yamamoto, 430/138, 944, 945 [IMAGE AVAILABLE]

63. 4,902,604, Feb. 20, 1990, Photopolymerizable composition containing salts of organic cationic dyes and organic boron compounds; Jun Yamaguchi, et al., 430/281.1, 138, 339, 341, 495.1, 914, 916, 927; 544/251, 345; 548/152, 217, 302.1, 302.7 [IMAGE AVAILABLE]
64. 4,902,600, Feb. 20, 1990, Light-sensitive material comprising light-sensitive layer provided on support wherein the light-sensitive layer and support have specified pH values; Shigehisa Tamagawa, et al., 430/138, 203, 270.1, 281.1, 538, 939 [IMAGE AVAILABLE]
65. 4,902,599, Feb. 20, 1990, Light-sensitive material; Soichiro Yamamoto, et al., 430/138, 203, 264, 281.1, 617, 619, 620, 964 [IMAGE AVAILABLE]
66. 4,885,224, Dec. 5, 1989, Light-sensitive material containing silver halide, reducing agent, polymerizable compound and a decolorizable dye; Soichiro Yamamoto, et al., 430/138, 203, 270.1, 281.1, 510, 517 [IMAGE AVAILABLE]
67. 4,883,737, Nov. 28, 1989, Light-sensitive material containing silver halide, reducing agent and polymerizable compound and containing core/shell grains doped with iridium; Soichiro Yamamoto, 430/138, 270.1, 281.1, 567, 569 [IMAGE AVAILABLE]
68. 4,880,721, Nov. 14, 1989, Light-sensitive dual-walled microcapsule containing polymerizable compound and silver halide, and light-sensitive material employing the same; Shunichi Ishikawa, 430/138; 428/402.2, 402.21, 402.24; 430/270.1, 281.1 [IMAGE AVAILABLE]
69. 4,879,200, Nov. 7, 1989, Light-sensitive material containing silver halide, reducing agent, polymerizable compound, and a quaternary ammonium development accelerator; Yutaka Oka, 430/138, 203, 217, 253, 254, 270.1, 281.1, 487 [IMAGE AVAILABLE]
70. 4,876,170, Oct. 24, 1989, Light-sensitive material comprising light-sensitive layer containing microcapsules provided on specific paper support; Shigehisa Tamagawa, et al., 430/138, 203, 538 [IMAGE AVAILABLE]
71. 4,874,684, Oct. 17, 1989, Light-sensitive material containing silver halide, reducing agent and polymerizable compound in microcapsules separately sensitized; Soichiro Yamamoto, 430/138, 944 [IMAGE AVAILABLE]
72. 4,871,643, Oct. 3, 1989, Image-forming method employing light-sensitive material and image-receiving material comprising microcapsules and specified paper support; Shigehisa Tamagawa, et al., 430/138; 428/537.1, 537.5; 430/203, 253, 254, 538 [IMAGE AVAILABLE]
73. 4,871,642, Oct. 3, 1989, Light-sensitive material comprising light-sensitive layer provided on a support comprising a water resistant coating layer; Shigehisa Tamagawa, et al., 430/138, 203, 281.1, 292, 523, 538 [IMAGE AVAILABLE]
74. 4,868,087, Sep. 19, 1989, Light-sensitive material containing silver halide, reducing agent and polymerizable compound and further comprising a white pigment; Soichiro Yamamoto, 430/138, 203, 220, 517 [IMAGE AVAILABLE]
75. 4,865,941, Sep. 12, 1989, Image-forming method employing light-sensitive material having a specified paper support; Shigehisa Tamagawa, et al., 430/138, 203, 212, 213, 253, 254, 538 [IMAGE AVAILABLE]
76. 4,861,696, Aug. 29, 1989, Light-sensitive material comprising light-sensitive layer provided on support having low air permeability; Shigehisa Tamagawa, et al., 430/138, 203, 270.1, 281.1, 538 [IMAGE AVAILABLE]

AVAILABLE]

77. 4,853,312, Aug. 1, 1989, Material with pH not higher than 7 containing silver halide, reducing agent and polymerizable compound; Makoto Yamada, 430/138, 203, 254, 264, 330, 607 [IMAGE AVAILABLE]

78. 4,842,977, Jun. 27, 1989, Light-sensitive material containing silver halide, reducing agent, polymerizable compound and a base or base precursor; Fujio Kakimi, 430/138, 203, 617, 955 [IMAGE AVAILABLE]

79. 4,835,475, May 30, 1989, Battery tester including a **thermochromic** material; Niichi Hanakura, et al., 324/435; 345/106 [IMAGE AVAILABLE]

80. 4,835,272, May 30, 1989, Process for formation of base and light-sensitive material; Kozo Sato, et al., 544/158; 260/665R; 546/181, 290, 350; 548/136, 152, 165, 202, 445, 480; 549/80, 506; 560/104; 564/90, 218, 305 [IMAGE AVAILABLE]

81. 4,835,048, May 30, 1989, Optical information recording card using phase separation of polymer blend; Kazuhiko Maeda, et al., 428/323; 346/135.1; 347/264; 428/336, 421, 463, 913; 430/270.12, 945 [IMAGE AVAILABLE]

82. 4,830,947, May 16, 1989, Light-sensitive material containing silver halide, reducing agent and polymerizable compound; Yutaka Oka, 430/138, 220, 281.1, 292, 539, 545, 905, 909 [IMAGE AVAILABLE]

83. 4,814,252, Mar. 21, 1989, Light-sensitive material comprising light-sensitive layer provided on a paper support having a smooth surface on both sides; Shigehisa Tamagawa, et al., 430/138, 253, 254, 270.1, 281.1, 292, 538 [IMAGE AVAILABLE]

84. 4,797,343, Jan. 10, 1989, Light-sensitive material containing silver halide, reducing agent and polymerizable compound; Taku Nakamura, 430/138, 203, 264, 271.1, 281.1, 617, 955 [IMAGE AVAILABLE]

85. 4,792,514, Dec. 20, 1988, Light-sensitive material; Taku Nakamura, et al., 430/138, 203, 264, 351, 559, 617, 619, 620, 964 [IMAGE AVAILABLE]

86. 4,788,151, Nov. 29, 1988, Metal complexed acetylenic compounds useful as environmental indicating materials; Anthony F. Preziosi, et al., 436/2; 116/206, 207, 217; 252/408.1; 422/56, 57, 58; 556/81, 110, 118; 560/314; 564/48, 57, 58, 60 [IMAGE AVAILABLE]

87. 4,767,690, Aug. 30, 1988, Light-sensitive material containing silver halide, reducing agent and polymerizable compound; Soichiro Yamamoto, 430/138, 264, 270.1, 281.1 [IMAGE AVAILABLE]

88. 4,734,359, Mar. 29, 1988, Thermal recording material for display and image display device utilizing the same; Yoshihiro Oguchi, et al., 346/135.1, 21; 428/195, 913; 430/286.1; 503/200, 201 [IMAGE AVAILABLE]

89. 4,629,676, Dec. 16, 1986, Image forming method; Yoshihide Hayakawa, et al., 430/203, 199, 292, 325, 330, 351 [IMAGE AVAILABLE]

90. 4,555,471, Nov. 26, 1985, Image-recording materials and image-recording carried out using these; Helmut Barzynski, et al., 430/273.1; 428/913; 430/270.1, 281.1, 286.1, 302, 309, 325, 330, 346, 495.1, 945; 503/200, 216 [IMAGE AVAILABLE]

91. 4,515,877, May 7, 1985, Image-recording materials and image-recording carried out using these to produce an optical mask; Helmut Barzynski, et al., 430/5; 428/913; 430/156, 270.1, 330, 346, 495.1, 945; 503/200; 522/2, 907 [IMAGE AVAILABLE]

92. 4,425,161, Jan. 10, 1984, **Thermochromic** materials; Yutaka Shibahashi, et al., 106/31.17, 31.19, 31.24, 31.33; 427/148, 150 [IMAGE AVAILABLE]

93. 4,421,560, Dec. 20, 1983, Thermochromatic materials; Tutomu Kito, et al., 106/31.2, 31.22, 31.33; 427/150, 151 [IMAGE AVAILABLE]

94. 4,028,118, Jun. 7, 1977, **Thermochromic** materials; Norikazu Nakasuji, et al., 106/31.19; 428/29, 199, 913; 434/328; 503/209, 217, 220, 221 [IMAGE AVAILABLE]
